Assignment question::

Using PIR sensor and tmp36(Temperature sensor), piezo alarm, please create a circuit with Arduino Uno with below functionalities.

1. Alarm should give one sound when there is a motion near PIR sensor

2. Alarm should sound with different sound when the temperature is above 60 degrees.

Arduino code :

```
float temp;

int Buzz=A2;

int sensor=12;

int transistor=2;

void setup()

{

 Serial.begin(9600);

 pinMode(2,INPUT);

 pinMode(12,OUTPUT);

 Serial.println("waiting for motion");

}

void loop()

{

  double data=analogRead(A2);

  double n=data/1024;

  double vout=n*5;

  double off=vout-0.5;
```

```
 double temperature=off*100;
 Serial.print("Temperature data: ");
 Serial.println(temperature);

  if(temp>60)
 {
   digitalWrite(Buzz,HIGH);
   Serial.println("temperature detected");
   tone(12,100);
   delay(1000);
   tone(12,200);
   delay(1000);
 }
 int val = digitalRead(2);
 if(val ==HIGH)
{
   digitalWrite(transistor, HIGH);
   Serial.println("Motion Detected");
   tone(12,100);   //pin number, frequency, delay(optional)
   delay(1000);
   tone(12,200);
   delay(1000);
}
 if(temp <= 60)
 {
   digitalWrite(Buzz,LOW);
   Serial.println("No temperature detected");
   noTone(12);
   delay(500);
 }
 if(val == LOW)
```

```
 {
    digitalWrite(transistor, LOW);
    Serial.println("NO Motion");
    noTone(12);
    delay(500);
 }
  delay(1000);

}
```
