

ASWIN R

210519104020

Assignment 3:

Write python code for blinking LED and Traffic lights for Raspberry pi.

Only python code is enough, no need to execute in raspberry pi.

Note: you are allowed to use web search and complete the assignment.

Program :

```
gpiozero import Button, TrafficLights, Buzzer
```

```
mport RPi.GPIO as GPIO
```

```
import time
```

```
from time import sleep
```

```
buzzer = Buzzer(15)
```

```
button = Button(21)
```

```
lights = TrafficLights(25, 8, 7)
```

```
while True:
```

```
    button.wait_for_press()
```

```
    buzzer.on()
```

```
    light.green.on()
```

```
    sleep(1)
```

```
    lights.amber.on()
```

```
    sleep(1)
```

```
    lights.red.on()
```

```
    sleep(1)
```

```
lights.off()
```

```
buzzer.off()
```

```
GPIO.setmode(GPIO.BCM)
```

```
GPIO.setup(LED_PIN, GPIO.OUT)
```

```
while True:
```

```
    GPIO.output(LED_PIN, GPIO.HIGH)
```

```
    time.sleep(1)
```

```
    GPIO.output(LED_PIN, GPIO.LOW)
```

```
    time.sleep(1)
```

```
GPIO.cleanup()
```

Screenshot 1 :

The screenshot displays the Visual Studio Code interface with a Python script for controlling an LED and a buzzer using the RPi.GPIO library. The script is located in the file explorer on the left, and the code editor shows the following content:

```
1 gpiozero import Button, TrafficLights, Buzzer
2 import RPi.GPIO as GPIO
3 import time
4 from time import sleep
5 buzzer = Buzzer(15)
6 button = Button(21)
7 lights = TrafficLights(25, 8, 7)
8
9 while True:
10     button.wait_for_press()
11     buzzer.on()
12     light.green.on()
13     sleep(1)
14     lights.amber.on()
15     sleep(1)
16     lights.red.on()
17     sleep(1)
18     lights.off()
19     buzzer.off()
20 GPIO.setmode(GPIO.BCM)
21 GPIO.setup(LED_PIN, GPIO.OUT)
22
23 while True:
24     GPIO.output(LED_PIN, GPIO.HIGH)
25     time.sleep(1)
26     GPIO.output(LED_PIN, GPIO.LOW)
27     time.sleep(1)
28
29 GPIO.cleanup()
```

The terminal window at the bottom shows the execution of the script using the command `python -u "c:\Users\VAHBURAJA\libm"`. The output indicates that the script ran successfully and exited with code 0 in 0.344 seconds.

Screenshot 2 :
Program :

```
started
ers > ANBURAJA > ibm > ...
gpiozero import Button, TrafficLights, Buzzer
import RPi.GPIO as GPIO
import time
from time import sleep
buzzer = Buzzer(15)
button = Button(21)
lights = TrafficLights(25, 8, 7)

while True:
    button.wait_for_press()
    buzzer.on()
    light.green.on()
    sleep(1)
    lights.amber.on()
    sleep(1)
    lights.red.on()
    sleep(1)
    lights.off()
    buzzer.off()
GPIO.setmode(GPIO.BCM)
GPIO.setup(LED_PIN, GPIO.OUT)

while True:
    GPIO.output(LED_PIN, GPIO.HIGH)
    time.sleep(1)
    GPIO.output(LED_PIN, GPIO.LOW)
    time.sleep(1)

GPIO.cleanup()
```

Screenshot 3 :
Output :

```
PROBLEMS 15 OUTPUT DEBUG CONSOLE TERMINAL JUPYTER
[Running] python -u "c:\Users\ANBURAJA\ibm"
[Done] exited with code=0 in 0.344 seconds
